

summary

FishVerify, a free iOS app, helps users identify freshwater and saltwater fish with the click of a camera while simultaneously providing pertinent local fishing regulations. The app provides up-to-date rules and regulations on size and bag limits based on the phone's GPS location. No other fishing reference tool on the market contains live scan ability or the ability to import an image of a previous catch to instantly identify the species.

features

With an easy-to-use mobile app and a simple click of the camera, FishVerify helps anglers know the fish, know the rules:

Image Recognition

FishVerify uses the latest in image recognition and artificial intelligence to instantly identify your fish species. Just take a picture with your phone's camera or upload an existing image to enjoy species identification within seconds.

Local Fishing Regulations

The app provides up-to-date saltwater and freshwater fishing rules and regulations on size and bag limits based on your phone's GPS location. Quickly learn if your catch is in season, how many you can keep, the size limit, edibility, and much more.

Catch Log

FishVerify creates a catch log and captures the GPS coordinates of each catch so you can return to the same location over and over again.

Reference Tool

A must-have reference tool to identify local marine life, understand the complex and ever-changing rules and regulations and learn about marine habitat at a fraction of the cost as compared to most bulky charts and maps.

leadership

Chuck Mohr, Founder & CEO

Chuck has leveraged his love of fishing, corporate savviness, financial experience, and boundless spirit of entrepreneurship to help launch FishVerify.

Jason Randall, President & Founder

Jason is an entrepreneur and data scientist who brings more than fifteen years of data analysis and enterprise-level solution design to solve analytics and data engineering challenges.

Andy Sanchez, Founder & Chairman

Andy has been fishing Florida waters for over 40 years. He is the type of person that emphasizes safety on and around the water and is passionate about bringing awareness to marine conservation.

history

Created by experienced Florida fisherman, FishVerify began after a 2014 fishing trip turned up an unidentifiable fish species.

press-ready descriptions

Not sure which fish you caught? Just take a picture, FishVerify uses the latest in image recognition and artificial intelligence to identify your catch in seconds.
